## CARE AND MAINTENANCE OF YOUR FAUCET

Your Kingston Brass faucet has been finished to the most strict standards; however, due to the high content of minerals in the water, your finish may appear dull and tarnished after time. These are some do's and don'ts to maintain the luster on your faucet for many years to come.

- DO**
1. Use a silicon based caulking when installing.
  2. Clean your faucet with only a mild soap and water solution.
  3. Dry your faucet after using it.
  4. Give it a coat of Carnauba Wax periodically.

- DON'T**
1. Use plumbers putty when installing the faucet.
  2. Use any abrasive cleaning agents.

It may seem like a very simple and short list but it is that simple to maintain your faucet, looking shiny and new.

If your faucet is already looking somewhat dull and tarnished, before replacing it, try cleaning it with a 50/50 solution of vinegar and water, you may need to soak some rags and wrap around those stubborn areas, leave overnight and rinse completely in the morning, apply Carnauba wax once you have removed the mineral deposits.

## INSTALLATION INSTRUCTIONS Widespread Lavatory Faucet with Pop-Up

### BEFORE BEGINNING INSTALLATION:

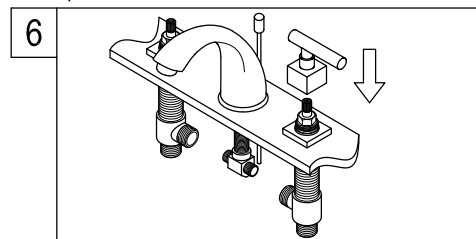

1. Flush plumbing lines to clear any debris.
2. Shut off both supply lines after flushing.

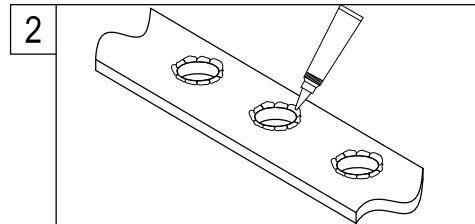

1. Remove the tee connector and spout mounting hardware from spout.

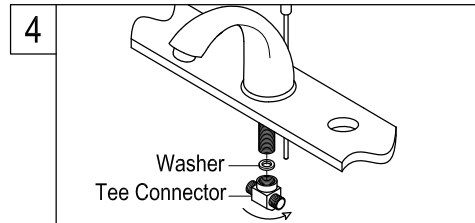

3. From the top of the sink insert the spout base ring (if applicable) and spout through the center hole. Slip the spout mounting hardware back onto the spout, hand tighten lock nut. Insert the pop-up rod through the hole in the back or top of the spout. (See pop-up installation below). Rotate the notched metal washer, to ensure smooth movement of the pop-up rod. Tighten the brass lock nut, test pop-up rod for ease of operation.

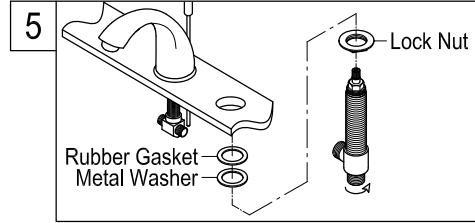

6. While holding from under the sink thread escutcheon on to valve assembly, install handle and secure with set screw, adjust height of escutcheon so that handle rotates without binding. Tighten bottom nut, please make sure to align direction of lever handles before tightening stem, do not over tighten lock nut as this may cause undue stress on stem body and cause leaking, which may result in water damage.

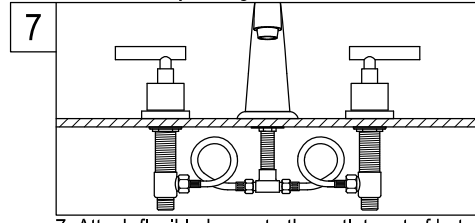

2. Sparingly apply a small bead of silicon caulking around all 3 holes on top of the sink (do not use Plumber's Putty as it may damage finish and void warranty).

4. Apply Teflon tape, insert the tee connector washer and thread tee connector on to spout shank.

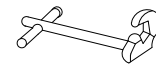

5. Hot and Cold Stem assemblies are easily identifiable by a Red or Blue band, thread lock nut and insert washers into stem assembly insert stem assembly through side holes from below.

7. Attach flexible hoses to the outlet port of hot and cold valve assembly, you may need to loop the hoses as shown on graphic and be caution not to overtighten.

### Need Tools:

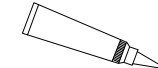

Basin Wrench

Adjustable Wrench

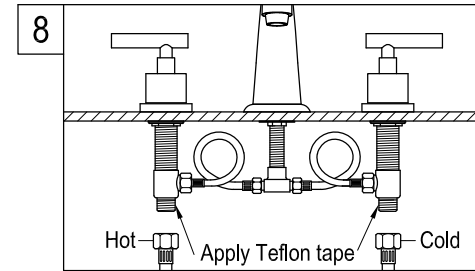

Teflon Tape

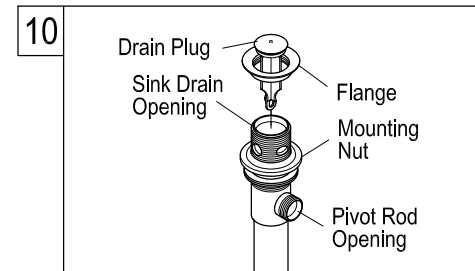

Silicone Sealant

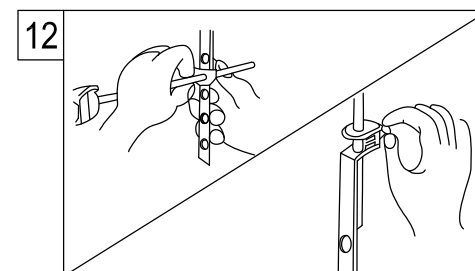

Screwdriver

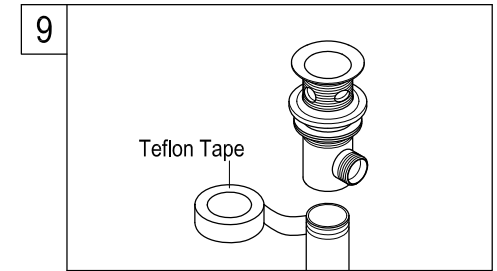

8. Apply Teflon to inlet port of stem assembly and thread supply lines (not included).

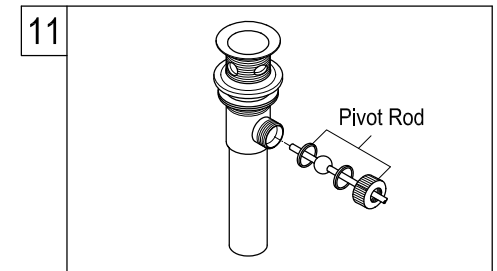

10. Apply silicone to bottom side of flange. Install flange body up through the drain opening, hold the drain flange body in position with pivot rod opening facing the back of sink and hand tighten the mounting nut. Be sure to clean excess silicone.

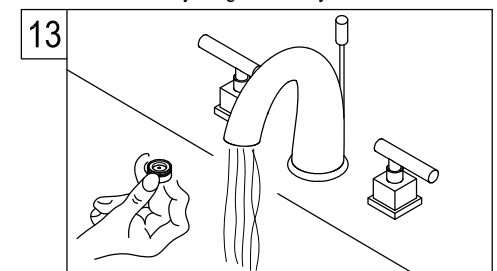

12. Guide the pivot rod through one of the holes on the lift rod strap and secure it with the spring clip. Then adjust the height of the lift rod by resetting the clevis screw. With lift rod in position on the faucet, insert lift rod through lift rod strap and secure with the clevis screw.

9. Thread mounting nut and bottom gasket onto drain body. Wrap top threaded end of the drain body with Teflon tape.

11. Place pivot rod into pivot rod opening. Slide pivot nut over pivot rod and thread it on the drain body. Tighten firmly.

13. Once connections have been made turn on water supply and check for leaks, if no leakage, remove aerator from spout and turn handles to the full open position, let the water run for at least 30 seconds, replace aerator.

### Warning!!!

- Do not over-tighten nut during installation.
- Over-tighten may crack the valve and cause severe leak.
